I'm wondering if it's possible to show pistols whilst they're sheathed on the Hero. It's apparent to me that it was intended for such a thing to happen, as the particle effects used on the aura of a pistol I'm wielding will show up on the left hand side in the position of a shoulder holster or something similar. The particle effects will always match the length of the pistol's barrel. I'm curious as to how one would go about showing the pistol, if this is possible. Shown below is a .png image with the Dragonstomper .48's flame aura appearing in the described area.

Do any other guns show up when sheathed?

Should be possible though, the utils.lua has some stuff related.

Huh. I'll have to look into that, then. Should I get something to work, I'll be sure to post the code and a screenshot of my success or hilarious failure.

this is in globals.gdb

I once made a pistol that was displayed in the sheath
you need to find "HideWhenSheathedOnFront" set to true

001C62E8 offset

and replace it to 0 (false)

but it will not appear on the belt, it will appear on the chest O_o

so I just changed the place of the sheathing of the fact that by using for the rifle

#08A1AB45

-> CarryingComponent #A3B2D002

--> AdditionalSheatheSlots #4C9A5D2A

---> Pistol #2C5DEB76

replace value hash

DO 00061EE4 D 52226653 DummyName | Character.Carry.SheathWeaponFront

to

DO 00061EE4 D DA0B5122 DummyName | Character.Carry.SheathRangedWeaponBack

Alrighty... TO THE HEX EDITOR.... when I feel up to dealing with it. Also, I'm gonna keep it on the

front. Judging by where the effects go through that occasional glitch, it should look pretty freakin' sweet.

EDIT: Wait... Where is globals.gdb again?

EDIT: Wait... Where is globals.gdb again?

I think it's in the levels bank. It's also updated for each DLC too.

Okay. Thanks. ONWARD!

EDIT: Alright, that's weird. I'm not getting the 001C62E8 offset. I have 001C62E0, but not 001C62e8.

on 001C62E0, I have "DefaultCarrySlot"
you're doing something wrong

All I did is open up HxD and search for the line labeled with HideWhenSheathedOnFront. And there is literally no 001C62E8 offset that I can find anywhere.

I seem to understand what you problem
on 001C62E0 offset you should see the following line
C5 9D 1C 81 00 00 00 00 01 00 00 00 00 00 00 00
you need to replace 1 on the 9th number
0 1 2 3 4 5 6 7 8 9 A B C D E F
this will be the 001C62E8 offset
as a result you should get
C5 9D 1C 81 00 00 00 00 00 00 00 00 00 00 00 00

[View Forum Message](#) <> [Reply to Message](#)

Alright, I'll give it a shot.

EDIT: Okay... this is what I've got for that line, as opposed to what you said I should have.

C5 9D 1C 81 08 7C 9C 50 16 D8 13 9C 08 45 5B CC

[View Forum Message](#) <> [Reply to Message](#)

You are not using latest DLC globals.gdb
this is original
so, you will need 001A8DE4 offset for it

Subject: Re: Is it possible?

[View Forum Message](#) <> [Reply to Message](#)

Ahh, okay. Thanks.

EDIT: Oh wait... Which number do I change to what on that line? I can't quite figure it out from your previous posts.

[View Forum Message](#) <> [Reply to Message](#)

five?

you know, you can go directly to a desired offset by pressing CTRL+G and paste 001A8DE4 just make sure that offset is relative to the begin of file

Subject: Re: Is it possible?

[View Forum Message](#) <> [Reply to Message](#)

Does that trick work with HxD? And lemme rephrase my question. Which specific byte on that line do I need to change, and to what do I need to change it to?

Subject: Re: Is it possible?

Posted by [Artofeel](#) on Thu, 19 Sep 2013 11:41:24 GMT

[View Forum Message](#) <> [Reply to Message](#)

yes, it work with HxD

you go on 001A8DE4 offset, and change 01 to 00

so, on 001A8DE0 you will see the following line

```
00 00 00 00 01 00 00 00 00 00 00 00 C5 9D 1C 81
```

and changed

```
00 00 00 00 00 00 00 00 00 00 00 00 C5 9D 1C 81
```
